

FIRENZE

CREST

STYLE 6212

“With its crested flair, this chair tells everyone there’s a prince or princess somewhere in the crowd.”

This unique line of chairs is constructed of an **exceptionally durable** yet light-weight extruded rust-proof 1.5" (3.80cm) aluminum frame, with reinforced welding for maximum support and durability. Innovative and wholly unique leg designs are swaged and tapered to reveal classic profile design details, providing a sophisticated contour with superior strength. Elegant tapered leg with no rungs are optional.

Plastic guides and bumper guards are strategically employed for **maximum protection** from scratching when stacked up to 7-high.

Comfort and leg circulation were studied in depth, prompting a redesign of the seat for longevity and exceptional comfort. Our Firenze line boasts a 0.375" (9.5mm) molded wood seat panel overlaid with a specially molded 2.5" (5.08cm) high density foam cushion to maintain its contour. The seat panel is softened to ensure fabric longevity. The cushion front was redesigned with a 10 degree radius to ensure improved leg circulation, underscoring our commitment to full body ergonomics.

Soft floor contact is facilitated by custom-designed plastic glides for heavy-duty commercial use, ensuring easy movement over both carpeted and hard surface flooring. Triple Umbrella Glides also available as a free option.

Powder coating creates a gorgeous and exceptionally durable finish for our aluminum seating frames. The process uses electrostatically charged colored powders, rather than liquid paint, and causes the powdered colors to be evenly bonded to the aluminum surfaces. The finished chair frame is not just beautiful, it is also many orders of magnitude tougher than a conventionally painted frame, providing a lustrous, high-quality finish for our chairs that is unsurpassed. Choose from an elegant array of fabrics or COM.

The front of the chair maintains its elegance without the need for a handhold opening. The overhang of the contoured 1.5" wide aluminum back frame facilitates lifting the chair. All chair frames available in both classic 17" seat width and comfort sized 19" seat width.

Conforms to ANSI-BIFMA 5.1 standards as confirmed by laboratory testing.
Meets CA TB-117 rigorous flammability requirements.
CA TB-133 upgrade available upon request.

The Firenze has a unique leg design that is swaged and tapered to reveal a **classic profile**. These design details provide a **sophisticated contour** with superior strength. We offer an elegant alternative with our tapered leg without rungs.
